

Swedish Research Council Formas

From Seed to Building

Forestry
management methods that contribute to sustainable production and management of the different values of the forest.

Wood materials
better quality of raw materials, which gives rise to new products, increased use and new fields of application.

Biodiversity
nature conservancy to preserve biodiversity.

Recreation and tourism
the perceptions of different groups and knowledge of how different conflicts of interest can be managed.

Wood construction
use of the potential that increased use of timber in construction presents.

Formas, the Swedish Research Council for Environment, Agricultural Sciences and Spatial Planning, is a governmental research-funding agency. Formas encourages and supports scientifically significant research related to sustainable development.
